ÍNDICE DE PROTEÇÃO

Proteção contra corpos sólidos de diâmetro superior a 12mm.

Proteção contra corpos sólidos de diâmetro superior a 1mm.
Protegido contra projeção de água.

Proteção contra corpos sólidos de diâmetro inferior a 1mm.
Protegido contra projeção de água.

Totalmente estanque contra poeiras.
Protegido contra jatos de água.

Totalmente estanque contra poeiras.
Protegido contra fortes jatos de água (força das ondas do mar).

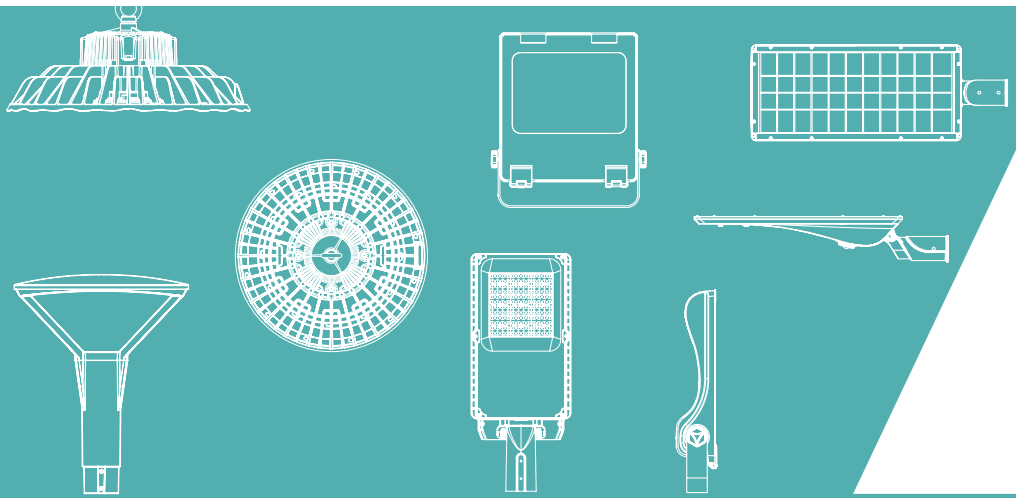

Totalmente estanque contra poeiras.
Protegido contra efeitos de imersão (máx. 1 metro até 30 minutos).

Totalmente estanque contra poeiras.
Protegido contra efeitos de imersão prolongada em água (máx. 3 metros).

Totalmente estanque contra poeiras.
Protegido contra jatos de água de alta pressão e alta temperatura.

LUMINÁRIA MODULAR SMART CITY
(sob consulta)

Luminária personalizável à medida do seu projecto

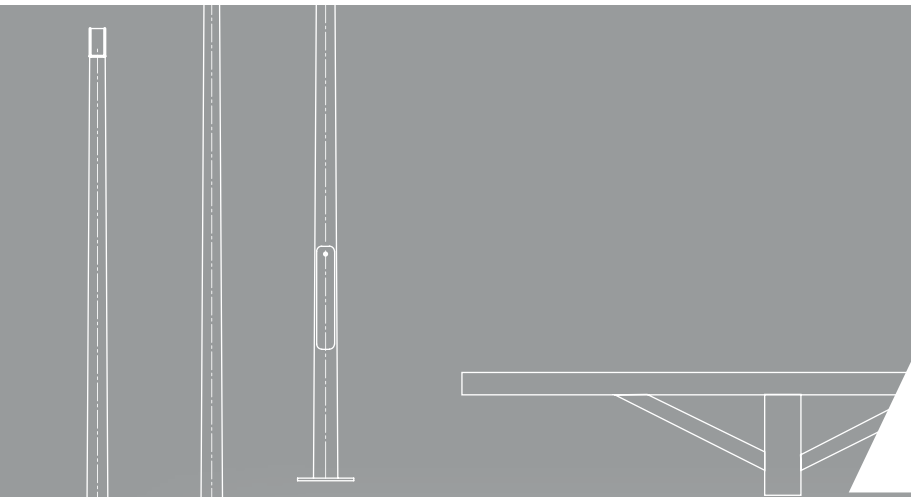

Escolha os módulos a colocar na sua luminária

Luminária LED

Potência	30W / 50W
Tensão de entrada	220-240Vac
IP	66
IK	08
Fluxo luminoso	150Lm/W
Cor da luz	3000K / 4000K
Ângulo de abertura	360°
Regulação	0-10V / DALI
SPD	20Kv
CRI	>80
Fator de potência	>0.9
Altura	3,50m a 5m
Material	Alumínio
Classe de isolamento	Classe I
Temp. funcionamento	-20° ~ +45°C
Vida útil	>60 000H (L90B10)
Acabamento	Grafite

ESTUDOS LUMINOTÉCNICOS

Os estudos luminotécnicos constituem uma etapa fundamental no desenvolvimento de projetos de iluminação eficientes, funcionais e esteticamente adequados. Estes estudos visam analisar, dimensionar e otimizar a distribuição da luz em ambientes internos e externos, garantindo níveis adequados de iluminação, conforto visual e eficiência energética, de acordo com normas técnicas e necessidades específicas de cada espaço.

A elaboração de um estudo luminotécnico inicia-se com a análise detalhada do ambiente, considerando fatores como dimensões do espaço, cores e materiais das superfícies, atividades a serem realizadas e disponibilidade de luz natural. A partir dessas informações, são definidos os níveis de iluminação recomendados, geralmente com base em normas internacionais, como as estabelecidas pela Comissão Internacional de Iluminação (CIE) ou normas europeias e nacionais aplicáveis.

Na fase de projeto, são selecionados os equipamentos de iluminação mais adequados, levando em conta características como fluxo luminoso, temperatura de cor, índice de reprodução cromática (IRC), eficiência energética e vida útil. O DIALUX é um software especializado para simular a distribuição da luz no ambiente, permitindo prever resultados antes da implementação e ajustar o projeto para alcançar o desempenho desejado.

Os nossos projetos luminotécnicos contribuem significativamente para a redução do consumo energético, através das nossas luminárias LED de elevado fluxo luminoso.
